Backend Software Engineer

AI-native backend engineer at Dexaminds building **Go**, **PostgreSQL**, and **AWS** systems for job intelligence and healthcare-document extraction. Owns SpotMyJob's source-governance and job-transformation services and contributes to its TypeScript seeker-search service. Increased transformation throughput by **64%**, improved vector ingestion by **17x**, and reduced a PostgreSQL reference-data load from more than 30 minutes to under 3 minutes within fixed compute limits.

Work Experience

Dexaminds, Hyderabad

Sep 2025 to Present

Software Engineer

- Architected **SpotMyJob** as 3 independently deployable microservices for employer-source governance, canonical job transformation, and seeker search; owned the 2 Go services and contributed ingestion, location, skill, and ranking work to the TypeScript search service
- Increased job-transformation throughput by **64%** under fixed CPU and memory limits, improved vector ingestion by **17x**, and reduced a reference-data import from more than 30 minutes to under 3 minutes through bounded worker concurrency, PostgreSQL connection-pool sizing, half-precision HNSW indexes, and PostgreSQL COPY
- Built hybrid search across pgvector, PostgreSQL full-text search, structured skill identity, and Reciprocal Rank Fusion; integrated Cloudflare Workers AI's Qwen3 model through an OpenAI-compatible API using the same embedding version for jobs and seeker queries
- Built Osulo's Go document-ingestion service and **Clinical Document Intelligence Service**, integrating Vertex AI Gemini and Azure OpenAI GPT for clinical field extraction; measured **52.3s** ingestion, **48.1s** extraction, a **0.2s** service handoff, and **100.6s** end to end
- Deployed both products with ECS, RDS, S3, EventBridge, Step Functions, SQS/DLQ, Terraform, Docker, GitHub Actions, and CloudWatch; protected retries with durable cursors, idempotent upserts, tombstones, and reconciliation
- Used AI to research unfamiliar problems, compare implementation options, debug failures, and review changes; checked conclusions against primary documentation, peer feedback, automated tests, benchmarks, CloudWatch metrics and logs, and AWS execution history

Dexaminds, Hyderabad

Jun 2025 to Sep 2025

Software Engineer Intern

- Built reusable **React/TypeScript** components with lazy loading and code splitting, then integrated and tested the related API changes
- Tracked down and fixed **15+ production bugs** across frontend and backend using Chrome DevTools and server logs, tracing each to root cause and deploying fixes to production

Skills

Languages: Go | TypeScript | SQL | Python

Backend & APIs: Go | TypeScript | Fastify | REST APIs | Microservices

Data & Search: PostgreSQL | pgvector | Hybrid Search

Cloud & Infrastructure: AWS | Terraform | Docker | GitHub Actions

Applied AI: LLM API Integration | Embedding Systems

Testing: Unit Testing | Integration Testing | Contract Testing

Frontend: React | Next.js | Tailwind CSS

Projects

ResumeCanvas | Live | Next.js 16, React 19, MongoDB, TypeScript, Groq AI, Puppeteer

Dec 2025

- Built an AI-powered resume platform with Next.js 16, React 19, MongoDB, and TypeScript; used caching and 7 targeted indexes to keep responses under **100ms** and cut query load by **60%**
- Added 8 AI features including ATS scoring, keyword analysis, cover letter generation, and job matching, backed by **95.2%** automated test coverage (129 tests, 220 assertions)
- Developed 5 resume templates with real-time preview, Puppeteer PDF export, public sharing with custom slugs, and validated forms via React Hook Form and Zod

Education

GITAM University, B.Tech in Computer Science, Hyderabad | CGPA: 8.2 / 10

Aug 2021 to Jun 2025

Certifications

- **IBM Full Stack Software Developer** | Coursera | Jan 2025
- **AWS Cloud Foundations & Cloud Architecting** | AWS Academy | May to Jun 2024
- **MongoDB Python Developer Path** | MongoDB University | Nov 2025
