## Professional Summary

Software Engineer building Go and TypeScript systems with PostgreSQL and Amazon Web Services (AWS) across job intelligence and patient-care products. Primary contributor to backend, search, and applied AI work, using AI throughout research, implementation, debugging, and review while validating decisions through tests, benchmarks, deployment, and production monitoring.

## Work Experience

### Software Engineer

Sep 2025 to Present

Dexaminds, Hyderabad

- Built SpotMyJob's 2 Go microservices for employer-source governance and job transformation, defining versioned contracts with its TypeScript seeker-search service to keep 3 services independently deployable
- Raised transformation throughput by **64%** under fixed compute limits, improved vector ingestion by **17x**, and cut a PostgreSQL load from over 30 minutes to under 3 minutes using bounded concurrency, PostgreSQL connection-pool sizing, HNSW index tuning, and PostgreSQL COPY
- Implemented hybrid search with pgvector, PostgreSQL full-text search, skill identity, and Reciprocal Rank Fusion; integrated Cloudflare Workers AI through an OpenAI-compatible API to keep job and seeker embeddings in one versioned semantic space
- Developed Osulo's Go document-ingestion and Clinical Document Intelligence Service as primary contributor, integrating Vertex AI Gemini and Azure OpenAI GPT for structured clinical data extraction; measured 52-second ingestion, 48-second extraction, and a 0.2-second handoff
- Collaborated with product and engineering peers in a fast-paced startup, shipping application and AWS infrastructure changes with Terraform, Docker, GitHub Actions, code reviews, automated tests, and CloudWatch runtime verification

### Software Engineer Intern

Jun 2025 to Sep 2025

Dexaminds, Hyderabad

- Built reusable React and TypeScript components with lazy loading and code splitting, then integrated and tested the related API changes in Agile sprints
- Diagnosed and fixed **15+ production defects** across frontend and backend code using Chrome DevTools and server logs, tracing each issue to its root cause before deployment

## Technical Skills

**Languages:** Go | TypeScript | Python | SQL

**Backend & APIs:** REST APIs | Microservices | Fastify | OpenAPI

**Data & Search:** PostgreSQL | MongoDB | pgvector | Hybrid Search

**Cloud & Delivery:** Amazon Web Services (AWS) | Terraform | Docker | GitHub Actions (CI/CD)

**Applied AI:** LLM API Integration | Embedding Systems

**Testing:** Unit Testing | Integration Testing | Contract Testing

**Frontend:** React | Next.js | Tailwind CSS

## Projects

**ResumeCanvas** | Live | Next.js 16, React 19, MongoDB, TypeScript, Groq AI, Puppeteer

Dec 2025

- Built an AI-assisted resume platform with caching and 7 targeted MongoDB indexes, keeping responses under **100ms** and reducing query load by **60%**
- Added 8 features for ATS scoring, keyword analysis, cover letters, and job matching; reached **95.2%** automated test coverage across 129 tests and 220 assertions

## Education

**GITAM University**, Bachelor of Technology in Computer Science | CGPA: 8.2/10

Aug 2021 to Jun 2025

## Certifications

- IBM Full Stack Software Developer** | Coursera | Jan 2025
- AWS Cloud Foundations & Cloud Architecting** | AWS Academy | May to Jun 2024
- MongoDB Python Developer Path** | MongoDB University | Nov 2025
